

Shaping Destiny Presents – A day of exploration!

10 June at the Radcliffe Observatory Quarter, Oxford.

Shaping Destiny is a multi-disciplinary public engagement project led by members of the Department of Physiology, Anatomy and Genetics (DPAG) and TORCH. We are bringing together the fields of immersive technology, developmental genetics, and creative performance, to explore the force of the key concepts of destiny and embodiment.

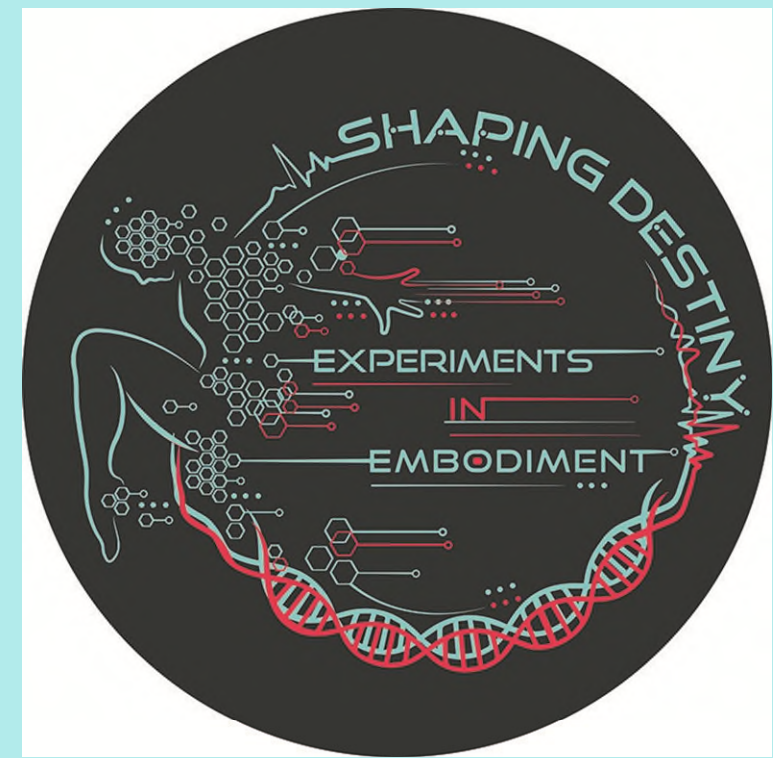

Join us to explore the power of the embodied imagination in an experiment combining scientific analysis and dance, cultural history and virtual reality. Wrestle with key shared notions such as fate, determinism and culture in both cellular and creative domains, investigate human norms, our histories, and your futures.

The Oxford Peoples Theatre performance (3 shows)

The VR Experience

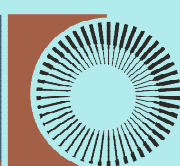

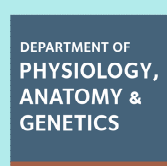

Parasol, Body Politic dance performances.
